

V ponedeljek, 16. decembra bo imela prof. Maruša Bradač (Univerza Kalifornije, Davis) astrodebato z naslovom **The Final Frontier: Galaxies at the Epoch of Reionization**. Predavanje bo na Fakulteti za matematiko in fiziko (Jadranska 19, Ljubljana) v predavalnici F6 ob 12. uri. Vljudno vabljeni!

The Final Frontier: Galaxies at the Epoch of Reionization

When did galaxies start forming stars? What is the role of distant galaxies in galaxy formation models and the epoch of reionization? What are the conditions in typical low-mass, star-forming galaxies at $z \geq 6$ and above? Recent observations with HST and Spitzer indicate several critical puzzles in studies that address these questions. Chief among those – galaxies – might have started forming stars earlier than previously thought (
